E2.3.2 Priority 2 Areas shall be maintained as follows:

- (b) Shrubs shall be pruned in the spring before leafing out to remove deadwood, broken branches or to improve visual balance. By mid to late June following the emergence of new growth, deciduous shrubs shall be cut back as necessary to an attractive consistent appearance. Tight shaping is not desirable. On evergreen shrubs, any dead or browning foliage shall be removed as it is observed.
- (c) Insect or disease problems shall be reported to the on-site contact when observed. Appropriate and reasonable measures to control these problems shall be the responsibility of the Contractor.

Sucker growth on Shubert Chokecherry shall be pruned on a monthly basis. Suckers shall not be treated with a systemic herbicide. Supplemental watering of the twenty-four (24) trees beyond irrigation coverage should be done 2-5 times per season depending on the seasonal rainfall.
- (b) Fertilizing of all trees shall be done once per year in the spring by injection of water-soluble fertilizer at least 100 mm below the ground surface. Injections will occur on a 1 m grid beneath canopy and extend 1 m beyond canopy dripline. Tree Wells shall be cultivated biweekly for removal of grass, weeds and suckers.
