In-Person Customer Service Hours:
Tuesday to Friday 8:30 am to 4:30 pm. All
Zoning, Permits and Plan Examination services
are available at Unit 31 – 30 Fort Street.

Mondays from 8:30 am to 4:30 pm are reserved
for telephone inquiries and completed application
drop-offs. This enables Zoning and Permits staff
to process building and development applications
received throughout the week.

For inquiries, please contact:
Zoning and Permits Branch
PH: 204-986-5140

or

311
Winnipeg
at your service.

Every effort has been made to ensure the accuracy
of information contained in this booklet. However, in
the event of a discrepancy between this booklet and
the governing City of Winnipeg By-law, the By-law will
take precedence.
Why are pedestrian connections important?
Safe walkways provide a clear route of travel from parking lots, public sidewalks, and bus stops. This provides safe access for all individuals accessing the building.

When do pedestrian connections need to be built?
When any new commercial, institutional, multifamily or industrial development is built, as per the following table:

<table>
<thead>
<tr>
<th>District</th>
<th>Commercial, institutional, multifamily uses</th>
<th>Industrial uses</th>
</tr>
</thead>
<tbody>
<tr>
<td>PR1, PR2, PR3, RMF, RMU, C1, C2, C3, C4, CMU, EI, MMU</td>
<td>Standard “A”</td>
<td>Standard “A”</td>
</tr>
<tr>
<td>A, RR5, RR2</td>
<td>Standard “B”</td>
<td>Standard “B”</td>
</tr>
<tr>
<td>M1, M2, M3</td>
<td>Standard “A”</td>
<td>Standard “B”</td>
</tr>
</tbody>
</table>

What is required?
Pedestrian connections must provide a link from the street to all main building entrances. Detailed drawings of pedestrian connections must be provided to Zoning and Permits Division as part of the development application.

How do pedestrian connections need to be built?

A. Materials:
Routes must be built with a stable, firm, slip-resistant and glare-free base. Acceptable materials include concrete, asphalt, and pavers.

If pavers are used, they shall not be spaced more than 5mm, or at their joint edge be beveled with a space greater than 10mm.

Figure 1: Joint Spacing in Pavers

B. Edges:
Standard “A” - the edges of the route must be defined from the main path of travel by either:
- significant difference in colour contrast and texture, or
- planting bed or grass on either side of the walkway.

Recommended Design Criteria
Provide directional signage where there is a change in direction along a pedestrian route and where the intended destination of the route it not clearly evident.

Provide a level of illumination of at least 50 lux along the entire route.

Where there are vertical objects adjacent to a route, the surface surrounding the objects must differ in texture and colour from the route and the objects.

C. Other requirements:
- A grade of 1:20 or less
- A cross slope not exceeding 1:50 (2%)
- Grates or catch basins in the route must have openings less than 13MM and the long dimension must be perpendicular to the direction of travel
- Pedestrian routes in parking lots must be designed to minimize the need for pedestrians to cross parking aisles or to walk behind parked cars on the parking surface.

Standard “B” - the same as Standard “A”, except that the edges need to differ from the main path with a significant colour contrast only, not with a different texture.
