---

Get a handle on leaks!
Leaks can waste water 24 hours a day, 7 days a week and cost you hundreds of dollars each year.

The water meter is your leak detector

Read the water meter regularly and follow these steps to see if there is a leak in your home.

1) Turn off all water-using appliances (e.g., washing machine, dishwasher, sprinkler).
2) Find your water meter – usually located in the basement or crawlspace.
3) Open the lid on the water meter. Every meter will have a sweep hand and some have a low flow indicator.

Check your toilets for leaks

The majority of leaks occur in the bathroom and the main culprit is the toilet.

Follow these simple steps to check your toilet for leaks:

1) Remove the toilet tank lid
2) Add a few drops of food colouring into the tank
3) Wait 15 minutes
4) If the water in the bowl has changed colour, then you have a leak

The most common cause for a leaking toilet is a worn out flapper valve. This is an easy and inexpensive fix. If you have any difficulty changing your flapper, we suggest you contact a licensed plumber.

Remember to check for leaks regularly to help save water.
